

# Benefits for FRAPP participants

## Internal

### FRAPP Feedback

- Always up-to-date information about MRL's (Maximum Residue Level) and status of pesticides in Europe
- Information about applied pesticides not allowed in Europe or which will expire in the future. This enables corrective and proactive measures.
- Analysis scope of laboratories can be optimised by comparison to the FRAPP data.
- FRAPP feedback is suitable for the own HACCP system.
- Producers of semi finished goods can use the FRAPP feedback for their own supplier assessment (supplier = e.g. farmer).
- Comparison of own company data with regional data and data worldwide. Excellent support for agronomists to develop their spraying programme (e.g. information about expired pesticides).

### Early Information System about scheduled lowering of MRL

- This enables proactive actions by informing concerned fruit suppliers or any other measure to avoid legal conflicts in the future.
- Possibility of transmitting comments to the European legislator via the SGF about possible problems in agricultural practice and practices incompatible with international trade.

## External

### FRAPP Confirmation

- This document can be provided to any purchaser of semi-finished goods as additional information to be used for the purchasers' HACCP and their supplier assessment (supplier = fruit processor).
- The participation in FRAPP improves the company's ability of a suitable risk assessment and risk management. It shows their commitment to the quality philosophy of the Voluntary Control System of the SGF.

### FRAPP Feedback (presentation only, data are not intended to be handed out)

- Companies can show their commitment to a global, proactive and sustainable food safety concept through participation in the FRAPP programme. E. g. during third party system audits the benefits of FRAPP will become more evident and the work of data collection could be appreciated more easily.
